Assignment 3

Problem:

Implementation of decimation and interpolation.

Technical details:

Input:

$$x[n] = \sin(2\pi f_0 n / f_s) + 0.5 \sin(2\pi f_1 n / f_s) + 0.6 \sin(2\pi f_2 n / f_s)$$

where, $f_0 = 100\text{Hz}$, $f_1 = 200\text{Hz}$, $f_2 = 300\text{Hz}$, $f_s = 2400\text{Hz}$

Generate 80 samples of input $x[n]$, where $n = 0$ to 79 .

Downsampler: $x_d[n] = x[Mn]$

Upsampler:

$$x_u[n] = \begin{cases} x_d[n/L], & \text{if } n \text{ is a multiple of } L \\ 0, & \text{otherwise} \end{cases}$$

1. Decimation and interpolation by factor 2 (M=L=2):

LPF(HBF) specifications

- *Anti aliasing Gain = 1, Anti imaging Gain = L*
- *Cutoff frequency (f_c) = 600 Hz*
- *Sampling frequency (f_s) = 2400 Hz*
- *Digital cutoff frequency (ω_c) = $\frac{\pi}{2}$*
- *Number of samples (N) = 51*

2. Decimation and interpolation by factor 4 (M=L=4):

LPF specifications

- *Anti aliasing Gain = 1, Anti imaging Gain = L*
- *Cutoff frequency (f_c) = 300 Hz*
- *Sampling frequency (f_s) = 2400 Hz*
- *Digital cutoff frequency (ω_c) = $\frac{\pi}{4}$*
- *Number of samples (N) = 51*

Instructions:

- Take input $x[n]$ and decimate it first and then interpolate to get $y[n]$.
- Compute the error vector $e[n] = y[n] - x[n]$ and average error.
- Write generalized code for decimation and interpolation by any factor.
- Please take care of practical implementation of decimation and interpolation as present in lecture 3.

Submission Details:

- Write C code to implement above system.
- **Coding format:** Write main.c and two separate files named common_functions.c which contains function

definitions and header file named `common_functions.h` which contains function declarations.

- Write your understanding about decimation and interpolation and observation from the experiment in your own words in MS word or Latex.
- Upload the below files in a single zip file with your id, Example: EE22MTECH11010_ **A1**.zip.
 1. `main.c`
 2. `common_functions.c`
 3. `common_functions.h`
 4. A text file containing your output $y[n]$ and error vector $e[n]$ and average error
 5. Pdf of your MS word or latex document.

Grading:

- Output - 50%
- coding format - 20%
- writing submission(pdf file) - 30%
- late submission - (-5)%
